

The Definition Of New Productive Force

In today's social atmosphere, the essence of new productive force is **a kind of advanced productive force**, which was proposed by President Xi Jinping in **September 2023**.

New productive force has **three characteristics: high technology, high efficiency, and high quality**, with the core symbol being a significant increase in total factor productivity. Its characteristics are mainly reflected in innovation, with the key emphasis on the excellent quality of products and services. The **essence** of achieving new quality productivity lies in promoting the leap of the three productivity **elements of workers, labor materials, and labor objects**.

Industries it covers include strategic **emerging industries** such as new energy, new materials, advanced manufacturing, and electronic information, Therefore, this new concept **promotes** a virtuous cycle of education, technology, and talent. It was driven by factors such as revolutionary technological breakthroughs, innovative allocation of production factors, and deep industrial transformation and upgrading. **Amazon** continuously introduces new productivity tools and technologies such as robot automation systems and drone delivery to improve efficiency.

There are three **methods to accelerate the development** of new productive forces: promoting the optimization and upgrading of industrial and supply chains, actively cultivating emerging and future industries, and deepening the innovation and development of the digital economy.

In the era of information, **contemporary college students** should also focus on improving their digital skills. Mastering skills such as data analysis and artificial intelligence, understanding the development trends, can provide more possibilities for the development of new quality productivity.
